The act of "pollination" occurs when pollen grains are moved between two flowers of the same species by wind or animals. Successful pollination results in the production of healthy fruit and fertile seeds, allowing plants to reproduce.

In the past, native bees and feral honey bees could meet all of a farmer's pollination needs for orchards, berry patches, squash, melons, vegetable seed, sunflowers, and other insect-pollinated crops. Today, the value of the pollination services that native bees provide in the United States is estimated to be worth about \$3 billion per year.

The hummingbird family has 328 species, that range exclusively in the Americas, from Alaska to the south of Argentina. Hummingbirds' wings move in a figure eight pattern while in flight, and are capable of flapping an average of 55 times per second. This allows them to hover in place, fly sideways, down, backwards and even upside down.

Unlike honey bees, bumble bees perform buzz pollination in which the bee grabs onto a flower's stamens and vibrates her flight muscles, releasing a burst of pollen from deep pores in the anther. This behavior is highly beneficial for the cross-pollination of blueberries, cranberries, tomatoes, and peppers, among other plants.

Pollinators play a key role in the production of more than 150 food crops in the U.S, including apples, alfalfa, almonds, blueberries, cranberries, kiwis, melons, pears, plums, and squash.

[www.pollinator.org](http://www.pollinator.org)

December

**Mission:**

Our mission is to be the leading provider of the finest, cut to order and customized produce for chefs and hospitality operations, while maintaining the highest standards of quality, safety and customer service.

**About World Food:**

With World Food you will always communicate with a chef or staff trained by chefs who understand your business and challenges. Our staff is proactive and puts our customer's needs first, responding to them quickly.

**Chef Mark**

Chef Mark Resnick keeps quality number one. This philosophy began in his childhood kitchen and has persisted through his graduation from Johnson and Wales University to restaurant ownership and now at World Food.

**Chef Tim**

Chef Tim Stottle, owner and operator with 30 years of hotel, fine dining and casino experience enjoys assisting his customers with a quality product only a chef can create.

Pollinator Partnership photographs by Lisa Britz and Dr. Stephen Buchmann

**Mission:**

The Pollinator Partnership's mission is to protect pollinators critical to food and ecosystems through conservation, education, and research. Signature initiatives include the North American Pollinator Protection Campaign (NAPPC), National Pollinator Week, and the Ecoregional Planting Guides.

**Company Overview:**

The Pollinator Partnership protects the habitats of managed and native pollinating animals vital to the incredibly vibrant North American ecosystems and agriculture. Pollinating animals are responsible for an estimated one out of every third bite of food and over 75% of all flowering plants.

**Get Involved:**

The Pollinator Partnership leverages the strengths of its extensive network to make a global impact. Join us in the fight against pollinator disappearance:
