Please address each of the questions below in as much detail as possible.

1. Brief Project Description *

2. What is the area of the project? *

(i.e. acres, hectares)

7. Describe the long-term commitment to this project. For example, number of active years, commitment through leadership changes, long-term funding and utility commitment.

3. What species were planted? Provide a species list and/or the proportion of native, non-invasive, and proportion of grasses and forbs. Please list how many species in each bloom period. *

4. In the current project area, what is the average percent cover of native plants?

5. In the current project area, what is the average percent cover of native flowering plants (forbs, shrubs, trees, and vines)?

6. What vegetation management practices (conservation mowing, herbicide and insecticide use, Integrated Vegetation Management, etc.) are being incorporated into the project in a way to support and protect pollinators? Are the people that will be maintaining the site trained in pollinator-promoting land management techniques? *

11. Describe how the project engages the public through outreach (include number of events per year, the ways that you are reaching the public, and any Pollinator Week activities)? *

8. Describe any current and/or past research and monitoring efforts at the project site. Include the duration and frequency of monitoring, the focus (plants and/or pollinators), and any partners engaged. *

10. Describe how you are communicating your research and monitoring results to the public and stakeholders. Do you report research findings regardless of results?

9. What have your research or monitoring findings demonstrated? Has there been a positive, negative, or neutral impact on plant and pollinator communities?

12. Describe any signage incorporated at the project site (include pictures). *
